

# Click2Form 2017.3

## Release Notes

### Prepare Model

---

#### Extract Tool

The Extract tool group includes two tool options: Midsurface and Skin. Midsurface is an existing tool from release 2017.2. Skin is a new tool for automatically detecting and highlighting a skin based on the mouse cursor location.

### Setup Model

---

#### Material

Power Law (Engg) in the Materials dialog is a new option that defines stress-strain curves from commonly available test parameters including Young's Modulus, Yield stress and Tensile stress. Uniform elongation can be optionally defined.

### Constraints

---

#### Pin

Selecting edges for Pin creation has been enhanced to support multiple edges with an automatic pre-highlight based on cursor location.

# Analyze

---

## Analysis Explorer

- Press Tonnage is a newly-supported result type.
- A Compare Results button has been added to the Analysis Explorer for comparing results among several feasibility runs.

# Blank

---

## Nesting

Stock is a new option that enables the selection between coil or sheet for nesting the blank shapes. The sheet size can be defined in the Preferences.

# Resolved Issues

- Issue of failure to create a midsurface for selected solid parts has been resolved.
- Issue of failure to fill holes and cutouts for selected midsurface parts has been resolved.
